

IRO Certificate #4599

NOTICE OF INDEPENDENT REVIEW DECISION

March 4, 2003

Re: IRO Case # M2-03-0448

Texas Worker's Compensation Commission:

___ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to ___ for an independent review. ___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, ___ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Orthopedic Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to ___ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the ___ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 46-year-old male who injured his right shoulder on ___. He underwent an unidentified surgical procedure in ___ with no relief of his pain. The patient was treated with physical therapy. Nerve conduction studies revealed carpal tunnel syndrome with no ulnar nerve abnormalities. The patient underwent arthroscopic subacromial decompression and labral debridement on 8/21/02. Because of persistent paresthesias, repeat nerve conduction studies were ordered on 10/14/02.

Requested Service

Repeat right upper extremity NCV/EMG

Decision

I agree with the carrier's decision to deny the requested studies.

Rationale

There is inadequate medical documentation to justify repeat nerve conduction studies. No documentation of progressive weakness, deterioration in two-point discrimination, or atrophy is mentioned. Persistence of symptoms alone is not an indication for repeat studies. Clinically, this patient has McGowan stage I ulnar neuritis that does not appear to have been treated based on the records presented for review.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
